WIFI

Why not offer Wifi to your church family and visitors?

Bring the internet into your church environment.

New Day offers reliable networking solutions throughout your church building.

How do we keep our admin wifi separate?
By having a dual account within the same bandwidth, with separate log-ins for the administrator and everyone else. This keeps all your church data secure and gives the admin's internet connection priority.

Will we have parental control?
Yes, the DrayTek routers have fully featured firewalls and content filtering. You won't have to worry about inappropriate use of the internet inside church.

Can we access our computers at home?
Yes, the DrayTek routers allow you to create a secure connection to another network over the internet.

Will we be able to have wifi in other rooms besides the main hall?
Yes, the DrayTek access points will enable wifi extension throughout your church building. As an access point it not only increases the coverage of the router but enables data rates of up to 300 Mbps.

Why do you use Draytek?
Because Draytek offers business grade features including VPN, firewall, content filtering and bandwith management.
