Live video that looks good

Why Wirecast?

Wirecast is used in churches all over the world. Some use it to broadcast their weekly services to the web, Facebook, Youtube or Twitter, whilst others want to build closer ties with people. Wirecast means that small churches with small budgets can produce professional-looking video.

What are some of the features of Wirecast?

Video, audio, graphics & titles are displayed on layers making it easy to select, move & resize getting the look that you want. Chroma key green screen. Stream to more than one website at a time, or to more than one facebook page at a time.

Stream and record at the same time. If someone can't attend your conference, send guests a link to join your live broadcast. Wirecast comes with over 100 free graphics and animated titles and captures a variety of IP sources or anything on your computer screen.

Can I interact with my audience?

Yes, curate and display social media comments live on screen in your broadcasts. Through Wirecast Go app (iOS only) live mobile video can be added too.

What computer equipment do I need?

New Day offers a bespoke high performance Intel 7i 6-core Windows 10 Video Workstation built for live streaming. Combining SDI & HDMI inputs, pre-installed Wirecast on request and you can install your own software. Comes with a 12 month warranty and New Day support for life.
